

Sustainable Interdependent Networks

Panos M. Pardalos

Center for Applied Optimization, University of Florida
www.ise.ufl.edu/pardalos

Sustainable interdependent networks have a wide spectrum of applications in computer science, electrical engineering, and smart infrastructures. We are going to discuss the next generation sustainability framework as well as smart cities with special emphasis on energy, communication, data analytics and financial networks. In addition, we will discuss solutions regarding performance and security challenges of developing interdependent networks in terms of networked control systems, scalable computation platforms, and dynamic social networks.
